SYNTHETIC RECORD. NOT A REAL PERSON. NOT FOR CLINICAL USE.

CT Head Report

Riverside University Hospital, Department of Radiology

Patient name:	Maya Ortiz
MRN:	SYN-004127
Date of birth:	2004-03-22 (age 22)
Sex:	Female
Document date:	2026-10-08
Examination:	CT head without intravenous contrast
Clinical indication:	Head injury during sport, persisting headache

TECHNIQUE

Axial non-contrast acquisition from the skull base to the vertex. 0.625 mm collimation, reconstructed at 2.5 mm in axial, coronal and sagittal planes. Bone algorithm reconstructions reviewed.

FINDINGS

No extra-axial collection. No intraparenchymal haemorrhage. Grey-white differentiation is preserved. Ventricles and basal cisterns are normal in size and configuration. No midline shift. No depressed or linear skull fracture on bone windows. Paranasal sinuses and mastoid air cells are clear.

IMPRESSION

No acute intracranial haemorrhage, mass effect or midline shift. No skull fracture. Study is negative for acute traumatic injury.

Note: a negative CT does not exclude concussion, and does not exclude microstructural injury. MRI is more sensitive and has been requested.
