SYNTHETIC RECORD. NOT A REAL PERSON. NOT FOR CLINICAL USE.

Research Genotyping Report

Riverside University Hospital, Research Genomics Laboratory

Patient name:	Maya Ortiz
MRN:	SYN-004127
Date of birth:	2004-03-22 (age 22)
Sex:	Female
Document date:	2026-10-14
Panel:	TBI recovery covariate panel, 4 loci
Method:	TaqMan allelic discrimination, confirmed by Sanger sequencing
Consent:	Research consent on file. Genetic box ticked separately.

RESULTS

APOE genotype:	e3/e4
BDNF Val66Met (rs6265):	Val/Met
COMT Val158Met (rs4680):	Val/Met
Call rate:	100% across all assayed loci

INTERPRETATION

Research panel only. These variants are common, are not diagnostic of anything, and do not predict an individual outcome. They are reported here because the recovery model uses them as covariates.

Approximately a quarter of people carry at least one APOE e4 allele, and about a third carry a BDNF Met allele. Neither is rare and neither is actionable on its own.

LIMITATIONS

This panel reads four positions. Nothing else in the sample was examined, and the sample is destroyed after reporting per protocol. No incidental findings are possible from a targeted assay of this kind.
