# Sports Medicine Follow-up

Riverside University Hospital, Sport and Exercise Medicine

**Patient name:** Maya Ortiz
**MRN:** SYN-004127
**Date of birth:** 2004-03-22 (age 22)
**Sex:** Female
**Document date:** 2026-10-17
**Days since injury:** 9

## INTERVAL HISTORY

Seen at day nine. She remains symptomatic. Headache is the dominant complaint, worse with reading and screen work, better with rest in a dark room. Fatigue by mid-afternoon. Light sensitivity persists. Nausea has largely settled on ondansetron as needed. Sleep is broken. No new neurological symptoms, no vomiting, no seizure.

## SYMPTOM SCORES, 0 TO 10

**Headache:** 6
**Pressure:** 4
**Neck pain:** 3
**Nausea:** 2
**Dizziness:** 3
**Blurred vision:** 2
**Light sensitivity:** 5
**Fatigue:** 6
**Total:** 31

## EXAMINATION

Smooth pursuit provokes headache. Near point of convergence 11 cm, which is receded. Vestibulo-ocular reflex testing provokes dizziness. Cervical spine has reduced rotation to the left with paraspinal tenderness. Balance on tandem stance is intact. No focal deficit.

## PLAN

1. Continue acetaminophen 500 mg as needed. Avoid daily analgesia.
2. Continue ondansetron 4 mg as needed for nausea.
3. Consider amitriptyline 10 mg at night for headache and sleep. Discussed with patient, to start if headache persists past day fourteen.
4. Cervical physiotherapy referral.
5. Weekly remote check-in enrolled on the research protocol.
6. No return to contact training. Graded return not yet started.
